COMMERCIAL VEHICLE ACCESSORIES

Van Guard design and manufacture load carrying and security product solutions for most makes and models of van available in today's marketplace.

Through innovative design, efficient production techniques and investment in technology we are able to respond quickly to the needs of our customers.

We also provide a bespoke design and manufacture service of our vehicle accessory range.

We are committed to our goal of producing quality products, using high quality materials backed up by a reliable 'next day' mail order service.

NEXT WORKING DAY DELIVERY!

In House Design & Manufacture

Van Guard design, manufacture and market a high quality range of light commercial vehicle accessories.

Our commitment to quality stems from our earliest origins as engineers, manufacturing parts for the aerospace industry. The skills and processes learnt over four decades are now ingrained in every aspect of our business, providing our customers with quality products and exceptional service.

Throughout every stage of design and production, our processes and practices are constantly monitored to guarantee our high standards are maintained. We are committed to staff development and investment in the latest technology to ensure we are at the forefront of technical development in our marketplace.

The materials we use are regularly reviewed and through close links to our suppliers, we can ensure our 'quality' values are upheld.

It is our ability to manufacture our own product that enables us to quickly and accurately respond to changes in the marketplace and customer demands.

Bespoke Design & Manufacture

In addition to our vehicle accessories, we also provide a sheet metal fabrication and precision engineering service to industries throughout the UK. The skills utilised in this area of our business can also be used to design and manufacture bespoke versions of our vehicle accessory range, for large orders.

“The products and service are first class.”

**QUALITY
NOT
COMPROMISE**

Our mission is:

- To support our business partners by providing superior products and services, at competitive prices, to assist them in achieving their goals.
- To uphold our values through a process of continuous investment, training, review and assessment not only of our products and systems, but also our personnel.
- To communicate regularly with our business partners ensuring we have a clear understanding of their business needs, and market requirements.

“Van Guard are good at their job, meet customers needs, their products are made well and last.”

Roof Bars

Designed to utilise the vehicle manufacturers' mounting points, our roof bars have now been developed for most of the vans available in today's light commercial market. Our range includes 2, 3, 4 and 5 bar systems all of which have been designed for durability, safety and security of the load. Every roof bar system we supply includes load stops within its specification, making it a 'complete' load carrying solution.

Roof Racks

Some vans are suitable for our range of extended roof racks. These racks have been developed to allow a full 8' x 4' sheet to be safely stowed within the boundaries of the roof rack itself, meaning it is no longer necessary to empty your van when needing to carry large sheet sizes. They also allow storage for ladders and other materials.

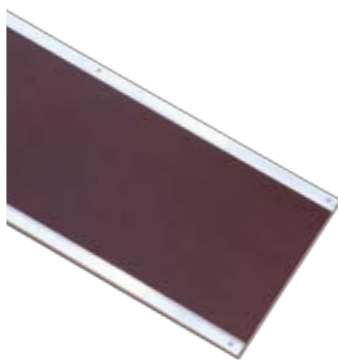

Roof Bars

Our heavy duty roof bars are made from stainless steel box section, which has excellent anti-corrosion properties and provides a much harder wearing surface than galvanised or zinc plated materials, this makes it ideal for the manufacture of high quality roof bars.

Roof Bar Extension Brackets

These galvanised and powder coated steel brackets are designed to raise the roof bars up. This provides extra clearance for roof ventilators or low level beacons. These brackets also provide clearance for ladder rollers to be used in conjunction with vans fitted with a tailgate.

Roof Platforms

Often called 'crawl boards', these are designed to provide a firm, level surface to bridge between our roof bars. Manufactured from 18mm thick phenolic birch plywood, so will not swell or split in wet conditions. They are 3 metres long with an aluminium finishing strip on each side.

8x4 Roof Rack with Roller

Manufactured from the same high quality materials used throughout our stainless steel range, our 8' x 4' roof rack systems come complete with adjustable load stops to secure loads into position, and a full width stainless steel roller to enable easy loading and unloading.

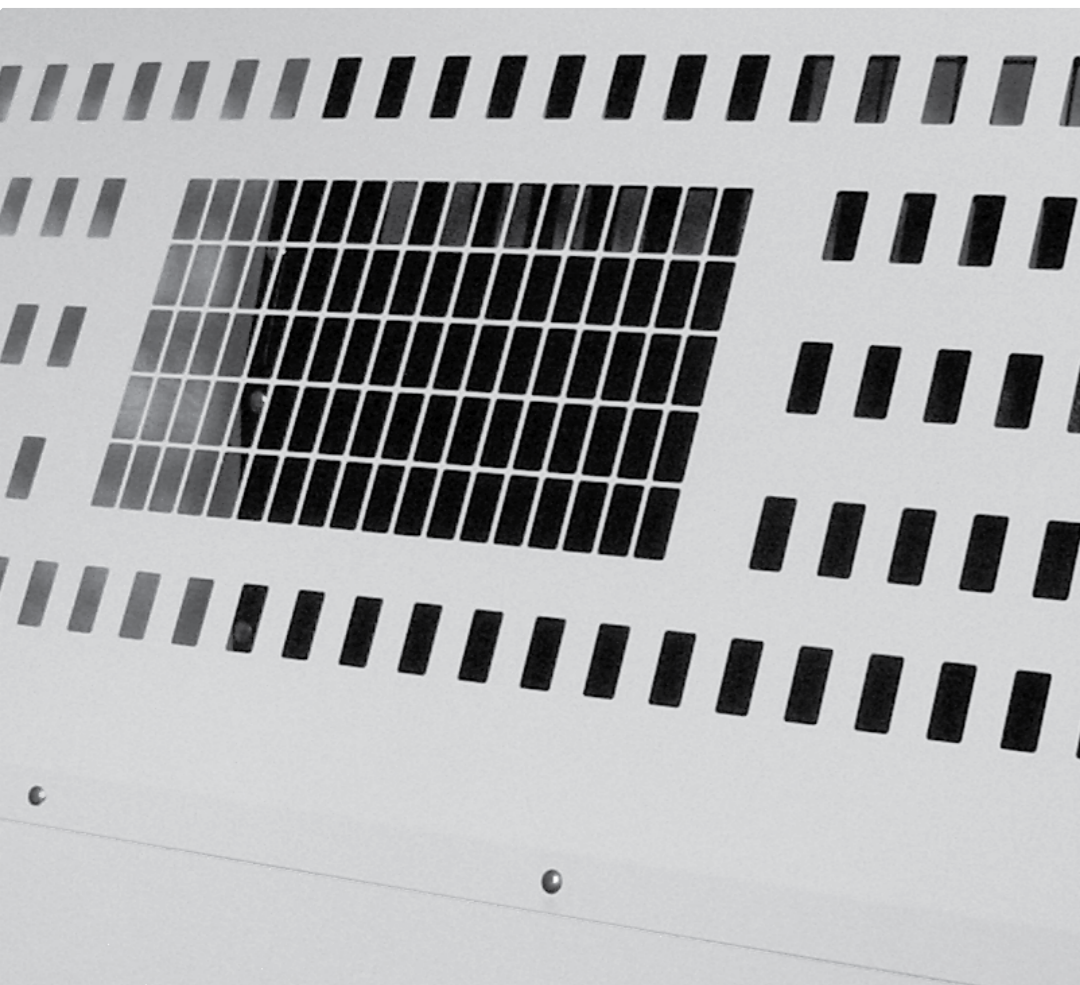

Gallery Rack (MAXRACK)

This system is a lightweight aluminium and stainless steel construction, which provides excellent durability and strength. Incorporated within the rack are a full width stainless steel roller for easy loading and a full width wind deflector, which reduces drag and saves fuel.

Roof Basket

These galvanised steel baskets are ideal for carrying bulky items and have been designed to easily fit to our roof bar range. Each basket is 1 metre long x 1.29 metres wide, and can be joined together to suit the length of your particular van, up to a maximum of 4 metres.

Bulkheads

Bulkheads provide an excellent deterrent against theft of property from the load area of the van, via the weaker access point in the cab.

Our steel bulkheads have been developed and designed to suit each particular van make and model. Each is manufactured from robust zinc coated steel, which is then powder coated in a light grey finish, providing excellent anti-corrosion properties.

There are three variations, solid, punched top or Perspex window.

Window Blanks and Grilles

Rear window grilles and blanks are a proven visual deterrent against theft from vans. Made from a single sheet of zinc coated steel, which is then powder coated to enhance the anti-corrosion properties, these grilles can be in either a punched or completely solid form, depending upon whether you wish to still have limited visibility out of the rear windows.

We currently supply the following types of security grilles/blanks:

- Rear Window Grilles (punched)
- Rear Window Blanks (solid)
- Tailgate Grille (punched)
- Tailgate Blank (solid)
- Side Window Security Kits (estate cars only)

Solid Bulkhead

Our solid bulkhead provides a complete visual barrier between the cab and load area, keeping your tools and stock hidden in the load area.

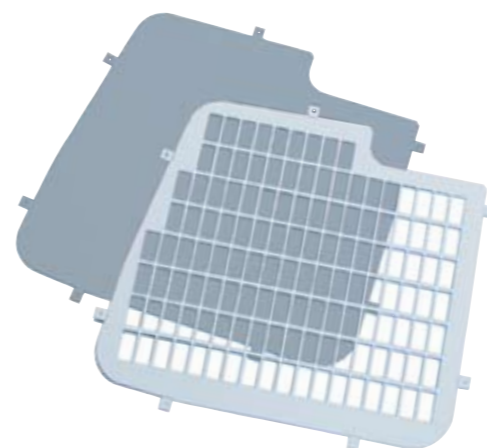

Punched Bulkhead

The punched bulkhead offers a limited view into the load area, which allows for the rear view mirror to still be used, without compromising on security.

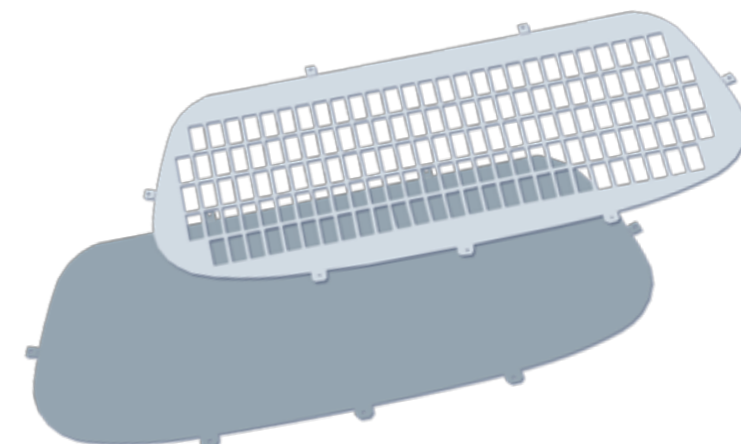

Window Bulkhead

With a small Perspex window located in line with the rear view mirror, the window bulkhead makes an excellent visual deterrent without restricting the driver's ability to see when reversing.

Rear Window Grille and Blank

Available in either punched or solid form, these grilles or blanks are designed to provide a deterrent against theft from vans with two rear, or 'barn' doors.

Tailgate Grille and Blank

Available in either punched or solid form, these grilles or blanks are designed to provide a deterrent against theft from vans with a single up and over, or 'tailgate' rear door.

Ladder Roller

To complement our range of quality roof bars and racks, we have developed a ladder roller system to enable easy stowing of ladders onto the roof. The roller is mounted in such a way that it protrudes over the rear of the van slightly, which means the ladder can be leant against it and safely rolled up onto the roof.

As ladders come in different shapes and sizes, and can be stowed in various positions across the roof, our stainless steel rollers are the full width of the roof, and so do not restrict where you stow your ladder.

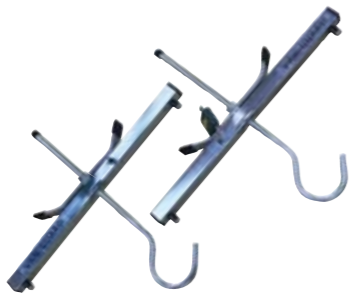

Ladder Slides (with Roller)

Our range of lightweight aluminium ladder slides provide a quick and easy solution for regular loading and unloading of ladders. The slides incorporate a stainless steel roller which means the ladders can be stowed with the minimum of effort.

Pipe Carriers

Anodised aluminium pipe carriers with die-cast end caps, available in both 2 metre and 3 metre lengths, with an option for either 100mm or 150mm diameter. We can also manufacture bespoke longer lengths for more specific load carrying requirements. Crash tested to ECE Reg 17.

Ladder Clamps

Provide a secure way of stowing ladders on your roof carrying system. Not only do they prevent the ladders from moving whilst in transit, but our clamps are also supplied with padlocks to keep your ladder secure. Sold in pairs and manufactured from zinc-plated steel.

Adjustable Front Load Stops

Designed to provide additional support to any load carried on the roof of the van, by preventing the load from slipping forward under braking. Sold in pairs, each bracket is made from galvanised steel, which is then powder coated to enhance its anti-corrosion properties.

Adjustable Load Stops

Every Van Guard roof rack and roof bar system (except Maxrack) includes adjustable load stops, to help secure the load. Should you wish to carry additional ladders or goods, we can supply extra pairs of galvanised steel load/ladder stops, incorporating a quick release handle for easy adjustment.

Rear Door Ladder

Designed to allow access to the roof of the van, enabling loads to be securely fastened into position. Each step has a lightweight yet robust aluminium tread plate, which provides some anti-slip properties. Constructed from galvanised steel, powder coated to help with anti-corrosion. Available in two sizes: 5 & 6 steps, 1230mm and 1530mm.

Rear Door Ladder with Anti-Climb Cover

This lockable cover prevents unwanted access to the roof. Developed and designed in conjunction with local authorities, incorporating two locks set into a galvanised steel cover, covering the rungs of the ladder to restrict access.

VG125/A
Four shelf unit including two rows of removable tough polymer trays (each tray has 4 removable polymer bins) and two shelves with removable dividers

VG125/B
Four shelf unit with two full width drawers and two shelves with removable dividers.

Steel Racking

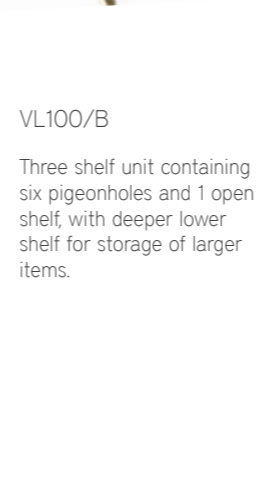

Our internal racking systems provide a simple, yet effective way of storing tools, components or materials to suit your requirements. They are not specific to each vehicle type, meaning they can be easily transferred should you change your van.

All of our internal racking units are supplied pre-assembled for easy installation and can be bolted together to form larger systems. Robust and versatile, these racking units are manufactured from tough galvanised steel, to provide a safe storage solution for many years to come.

The freestanding and durable design also makes them ideal for storing tools and products in a workshop environment.

VL100/A
Three shelf unit containing nine pigeonholes, with deeper lower shelf for storage of larger items.

VL100/B
Three shelf unit containing six pigeonholes and 1 open shelf, with deeper lower shelf for storage of larger items.

Wood Racking

In addition to our popular metal range, we have also developed a range of plywood racking units. These units are manufactured from high quality exterior grade birch plywood, providing exceptional tensile strength and durability.

Each unit is supplied fully assembled and ready to install, with all necessary fixings supplied. Our wooden range has been designed to fit over most wheel arches (except VL100/D range) to enable easy installation.

Using CNC technology, we are able to design and construct these units in two depths and five different designs, providing greater flexibility and choice.

Our van ply lining kits are manufactured from high quality birch plywood, which provides excellent tensile strength to give ultimate protection, via a multi laminate construction. All of our plywood is sourced from well-managed and certified sources, who plant more trees than they cut down.

VG125/G
Three shelf unit with each shelf containing removable dividers.

VG125/H
Four shelf unit containing twelve removable tough polymer trays (each tray includes 4 removable polymer bins).

VG125/F
Top shelf extension unit. Adds 200mm to the overall height and provides an additional shelf for extra storage.

VL100/C
Three shelf unit containing six pigeonholes and three drawers.

VL100/D
Four shelf slimline unit containing three drawers and one pigeonhole.

NEW VL100/E
Four shelf unit containing three pigeonholes and twelve removable tough polymer trays (each tray includes 4 removable polymer bins).

Tool Stores

Tool stores are an excellent way to keep your van tidy and protect your valuable tools. Our range of tool stores are manufactured from robust galvanised steel and incorporate locks to protect the contents from theft.

The range includes three sizes:

- 750mm long x 300mm deep x 300mm high
- 1000mm long x 400mm deep x 400mm high
- 1250mm long x 600mm deep x 600mm high

Bespoke sizes available (subject to minimum order).

Ply Lining Kits

Van ply lining kits protect your van by preventing damage from shifting loads and general wear and tear. Not only will they remove costly repair bills, they will enhance the value of the van should you come to sell it.

Our van ply lining kits are manufactured from high quality birch plywood, which provides excellent tensile strength to give ultimate protection, via a multi laminate construction. All of our plywood is sourced from well-managed and certified sources, who plant more trees than they cut down.

Proplate Door Security **NEW**

New to the vehicle security market, we are pleased to announce the inclusion of Proplate van door handle security plates in our product range.

These plates have been specifically designed to protect the vulnerable area around van door handles, preventing thieves from punching holes to access the inner handle, thereby damaging the van in the process.

The plates are easily installed, manufactured from stainless steel and do not require any drilling of the van door.

Van Seat Covers

Our range of hard wearing, heavy-duty universal seat covers provide excellent protection for van seats from the wear and tear of everyday use. These covers are available as single individual seats, or as a complete set in various colours, which includes one single and one double seat.

Flettner Air Vents

Flettner have become the market leaders in vehicle wind driven van extractors. These units are specifically designed to extract air from the van load area, reducing the effects from unwanted fumes, smells and condensation.

Stainless Steel Fixings

To uphold our ethos of 'quality not compromise', all Van Guard products are supplied with the necessary fixings and fitting instructions to be able to install them. To maintain the quality and longevity of our products we only supply stainless steel fixings.

“Good quality products and good customer service.”
